Note to Readers:
Comparability and limitations of the data
Statistics on sales of alcoholic beverages by volume should not be equated with data on consumption. Sales volumes include only sales as reported by the liquor authorities and their agencies, including sales by wineries, breweries, and other outlets that operate under license from the liquor authorities. Consumption of alcoholic beverages would include all of these sales, as well as any unreported volumes of alcohol sold through ferment-on-premises operations or other outlets, and any unrecorded or illegal transactions. Statistics on sales of alcoholic beverages by dollar value should not be equated with consumer expenditures on alcoholic beverages. The sales data refer to the revenues received by liquor authorities and their agents, and a portion of these revenues include sales to licensed establishments such as bars and restaurants. The value of sales of alcoholic beverages excludes all sales taxes, the value of returnable containers, and deposits. Absolute volume of sales of alcoholic beverages is calculated by multiplying the sales volume by the percentage of alcohol content for each product category.

Standard drink According to Health Canada guidelines, a standard drink is defined as a 341 mL (12 oz.) beer, cooler, or cider with $5 \%$ alcohol content, a 142 mL ( 5 oz .) glass of wine with $12 \%$ alcohol content, or a 43 mL ( 1.5 oz .) spirit drink with $40 \%$ alcohol
