## **Public Health Advisory**

## Iqaluit fox activity causes increased rabies risk

December 23, 2021 Iqaluit, Nunavut

The Department of Health would like to remind residents of Iqaluit that increased fox activity in the city is causing greater risk of exposure to rabies.

Due to the danger of rabies, we advise all residents to be on the lookout for foxes and to always keep their distance from unfamiliar dogs.

If you have been bitten or scratched by a fox or a dog, go to the hospital and report the incident **immediately**. Treatment must be started quickly after exposure, as rabies infections are almost always fatal.

Domestic animals that spend the majority of time tied up outdoors should be monitored for a change in behaviour and signs of rabies.

Signs of rabies include behaving strangely, staggering, frothing at the mouth, choking or making strange noises. Animals exhibiting these signs should be avoided and reported to the Regional Environmental Health Office or Conservations Officer.

If you see a fox or wolf wandering around the community, contact the **Conservation Officer** at (867) 975-7780. If your dog had contact with a fox or wolf, call the **Regional Environmental Health Officer** at (867) 975-1163.
